(57) Abstract

An auxiliary strainer apparatus **100** filters waste material generated during crockery washing. The auxiliary strainer apparatus **100** includes a foldable primary strainer **101** disposed at a distal end **102a** of a handle **102**, a rod **103** extending from a bottom of the primary strainer **101**, and a secondary strainer **104** positioned at a distal end **103a** of the rod **103**. The primary strainer **101** is configured to filter the waste material, and the secondary strainer **104** filters additional waste material escaping from the primary strainer **101**. The secondary strainer **104** is further configured to seat and steadily position the primary strainer **101** on an existing strainer body **110**. The primary strainer **101** is unfolded after the secondary strainer **104** is seated on the existing strainer body **110**.
