- (57) Sammendrag:  
**The present invention discloses a dishwasher assembly comprising a splash screen (100) to prevent splashes from the dishwasher assembly (120). The splash screen (100) comprises a plurality of elongated members (102) with a first end (104) and a second (106), configured to substantially overlaps in a lateral position, and at least one supporting member (108). The first end (104) is rotatably connected with the rest of the first ends (104) of the plurality of elongated members (102) via connecting provisions. The second end (106) of the elongated members (102) configured to extend in a uniformly manner upon extending the elongated members (104) by a user and retract within an interior (118) upon closing by the user. The supporting member (108), configured to overlaps the elongated members (102). The plurality of elongated members (102) and the supporting member (108) are connected to a hinging point (114) of the door (112) via the connecting provisions.**
