- (57) Sammendrag:  
**A portable heating apparatus 100 to supply a predetermined amount of heat and hot water is disclosed. The portable heating apparatus 100 comprises a condensing boiler 102 comprising an inlet port 104 to receive the water from any external supply unit wherein a central heating system 106 is configured to heat the water to a predefined temperature. A storage container 108 is configured to receive the predetermined amount of hot water from the condensing boiler 102 via a connecting pipe 110 raised by a central pump 112, wherein the storage container 108 is configured to constantly heat the hot water and routes the hot water to a radiator section via a distribution line 114a for heating a surrounding space. The condensing boiler 102 and the storage container 108 are mounted on a frame 118 and maneuvered on a plane surface using a handle 120 and a wheel assembly 122.**
