- (57) Sammendrag:  
**A grading apparatus (100) for use with grader is disclosed. The apparatus (100) comprises a pair of frames (101 and 102), a pair of wing frames (103 and 104), and a control assembly (106). The pair of frames (101 and 102) are in side by side relationship and the wing frames (103 and 104) are hingedly connected to the frames (101 and 102). A scraping member (105) extends from a bottom edge of frames (101 and 102) and wing frames (103 and 104). The control assembly (106) configured to move the frames (101 and 102) to form an inverted V configuration, which creates one or more cross slopes in a single drive trip of ground working implement. The apparatus (100) further comprises a pair of hydraulic actuators (109 and 110) to control the lifting of frames (101 and 102) and lateral elevation of wing frames (103 and 104), respectively.**
